STAVROS
AUTHENTIC GREEK CUISINE

Portfolio Project 1, Yves Faems

1. Introduction

- I would like to create a website for a (fictitious) Greek restaurant with authentic Greek cuisine, where Greek cultural events and Greek Language classes are hosted as well.

- The website user will be able to learn more about the owner's background and passion about his homeland's food, language and culture. The customer can browse the food menu, see where the restaurant is located (and how to get there with Google Maps), keep being informed about upcoming events, and schedule Greek language classes.

2. Expected List of Features

- A homepage to welcome the customer and to introduce the different categories/pages of the website;
- An about us page to allow the owner to talk about his background and passion;
- A menu page featuring the dishes (pictures, description, prices);
- A calendar page with the upcoming events;
- A Greek Language page with information about the classes and enrollment form;
- A contact us page for the customer to easily find the way to the restaurant, make reservations or ask more information about the Greek classes.

3. Market Survey

- Most of the five websites have these following features in common with mine: homepage, menu, contact us, events;
- 2 websites had a feature to order online (which I would like to include in mine, but it seems complicated for this first assignment); some had an extra catering page; none of the websites had a page that linked the venue to take Greek classes.

4. References

- Links to the websites relevant to my idea :
